Adithya G S

Full Stack Engineer | Java & Spring Boot

Bengaluru, India | +91 8073790117 | adithyaaadi563@gmail.com | LinkedIn | GitHub | Portfolio

Summary

Full Stack Engineer with **3+ years** designing and operating production applications across SaaS, advertising analytics, and fitness platforms. Owns technical solutions from evaluating architectural tradeoffs and documenting designs through implementation, testing, deployment, and production support. Focused on improving reliability, performance, and user experience across the stack.

Technical Skills

Languages: Java, TypeScript, JavaScript, SQL, Python

Backend & APIs: Spring Boot, Spring WebFlux, Spring Security, Spring Data JPA, Hibernate, Spring Data MongoDB, Node.js, Express, Fastify, OpenAPI, OAuth2, JWT, RBAC

Frontend: React, Redux, TanStack Query, HTML, CSS

Databases & Search: PostgreSQL, TimescaleDB, MongoDB, Redis, Elasticsearch, pgvector

Messaging & Data Pipelines: Kafka, AWS SQS, BullMQ, Airbyte, dbt

Cloud & DevOps: AWS (Lambda, S3, RDS, ECS, ECR, Lightsail, CodeBuild), Azure Functions, Docker, Kubernetes, GitHub Actions, Maven, Git

Testing & Observability: JUnit, Mockito, Jest, Postman, Grafana, Prometheus, CloudWatch

Engineering: REST API Design, Microservices, Event-Driven Architecture, Idempotency, Java Concurrency

Experience

Nighthack Labs — Jun 2024 – Present

Lead Software Engineer (Current Designation) — Bengaluru, India

- Led an end-to-end analytics redesign after identifying **N+1 queries**, expensive joins, missing indexes, and transactional/reporting contention. Evaluated storage alternatives, migrated **10M+ records** with validation and recovery planning, and introduced targeted indexing and precomputed reporting models, reducing API latency from **12–40 seconds to under 2 seconds**.
- Re-architected advertising-data ingestion into prioritized, dependency-aware sync stages with incremental reporting transformations, reducing initial dashboard data availability from **weeks to approximately 1–2 hours**.
- Designed recoverable competitor-ad collection with persistent job dispatch, concurrency-safe claiming, deduplication, retries, and crash recovery. Moved long-running processing off API requests and exposed progress in the UI.
- Built incremental semantic retrieval that vectorizes ad copy, supports similarity search, clusters related ads into themes, and supplies representative context for LLM-generated insights instead of repetitive raw records.
- Developed Java/Spring Boot services for a multi-tenant SaaS platform, including reactive usage metering, batched events, and reconciled subscription billing. Secured third-party integrations through OAuth2, encrypted tokens, and workspace-scoped access.
- Replaced shared long-running application workers with independently scalable queue-driven execution, adding workload isolation, persistent states, retries, and failure recovery.
- Architected memory-aware asynchronous video exports with bounded parallel downloads, persisted job state, multipart object uploads, and completion notifications, keeping large exports off the API request path.
- Built React applications, authentication screens, and admin dashboards from designs. Reworked data fetching and state management to remove a **20–30-second post-login delay**.
- Owned architectural decisions, design documentation, testing, and production releases. Configured CI/CD and cloud deployments, investigated runtime issues, reviewed code, and mentored two engineers.

Incture Technologies — Aug 2023 – May 2024

Associate Software Engineer — Bengaluru, India

- Developed and tested enterprise accounts-payable workflows and REST APIs using Java, Spring Boot, Hibernate, and SAP HANA, implementing business validations, persistence, exception handling, and frontend integrations.

Education

PES College of Engineering, Mandya — 2019 – 2023

B.E., Electronics and Communication Engineering | CGPA: 9.02/10
